Bedford Metals Commences Airborne Gravity Survey at Sheppard Lake Uranium Project

September 29, 2026 —**Bedford Metals Corp. (TSX-V: BFM, FWB: 08D, ISIN: CA0762301012) (the "Company" or "Bedford")** is pleased to announce that it has commenced an airborne FALCON® Gravity Gradiometry ("AGG") survey at its wholly-owned Sheppard Lake Uranium Project, located on the southern margin of Saskatchewan's Athabasca Basin.

The survey is being conducted by Xcalibur Smart Mapping and is designed to measure subtle variations in the Earth's gravity field caused by differences in subsurface rock density. Xcalibur's FALCON® technology provides high-resolution gravity data that can assist in mapping lithological contacts, geological structures, faults and other subsurface features that may influence the location of mineralization. The planned survey comprises approximately 1,046 line-kilometres, with 1,000-metre-spaced tie lines.

The AGG program complements Bedford's previously completed 747-line-kilometre MobileMT airborne electromagnetic survey. That survey identified multiple conductive anomalies coincident with the Warr Lake Zone, together with additional conductors associated with the TZ-1 and TZ-2 target areas.

The Company intends to integrate the new gravity data with the existing MobileMT results and historical exploration information to further refine its geological model of the Sheppard Lake Project. The combined datasets are expected to assist Bedford in evaluating structural and lithological relationships, refining priority target areas and planning the next stages of uranium exploration, including potential future drilling.

Peter Born, President of Bedford, commented: "The commencement of the FALCON® gravity survey represents another step in systematically advancing our understanding of the Sheppard Lake Project. By integrating high-resolution gravity data with the conductive targets identified by MobileMT and our existing geological information, we expect to improve our ability to evaluate and prioritize areas for follow-up exploration. We look forward to reviewing the results as we continue to advance the project."

Bedford remains steadfast in its commitment to conducting all exploration activities in an environmentally responsible manner and in close collaboration with local indigenous communities and other stakeholders. The Company places the highest priority on minimizing its environmental footprint while fostering positive and mutually respectful relationships within the region.

Francis R. Newton, PGeo, (OGQ No. 2129), a consultant to Bedford and a qualified person under National Instrument 43-101 – *Standards of Disclosure for Mineral Projects*, has reviewed the technical contents of this news release and has approved the disclosure of the technical information contained herein.
